WORK EXPERIENCE

Software Developer ZTA technology Pvt Ltd

09/2024 - Present

Achievements/Tasks

- Developed full-stack applications using React, Express, MongoDB, and Socket.IO. Handled both frontend and backend development, ensuring seamless functionality and user experience.
- Implemented user-centric features, ensuring high performance, scalability, and security.

Junior Software Developer 2Star IT solutions

01/2024 - 08/2024

Achievements/Tasks

- As a frontend developer with extensive project experience, I've honed my skills in JavaScript, React.js, NodeJs and Sql. My portfolio includes various projects, including a recent one for Suphala Production Company.
- Built RESTful APIs for seamless integration between frontend and backend systems.

EDUCATION

Bachelor of Engineering Sahvadri College of Engineering and Management, Manglore

08/2019 - 07/2023

Courses • BE in Computer Science and Engineering CGPA: 8.6

SKILLS

PROJECTS

Graphical Password Authentication

 Led the development of an innovative Graphical Password Authentication system, employing cutting-edge technologies including React.js and MongoDB. • Designed and implemented an intuitive user interface using React.js, enhancing user experience while ensuring robust security measures.

Chat System App

Built a real-time chat app using React, Express, and MongoDB.Integrated Socket.IO for live messaging features.Used Zustand to manage chat state efficiently. Designed a responsive UI with Shaden for a smooth user experience.

Suphala Production Software

Developed a web-based production management application using React.js for the frontend, Express.js for the backend, and MySQL for the database. Implemented features included user authentication, real-time production monitoring, and inventory control. Ensured a seamless user experience through dynamic and responsive interface design.

Share Vault

Share Vault is a secure and efficient file storage and sharing platform built using the MERN stack. The frontend is developed with React.is for a dynamic and responsive user interface. MongoDB is used as the database to store file metadata, while Node.js and Express handle the backend API for seamless file upload, retrieval, and sharing functionalities.
